ABSTRACT

To provide information to support school district considerations of changes in mathematics and science instruction, three issues were considered: (1) the adequacy of the California Basic Education Data System (CBEDS) for supporting an analysis of subject matter instruction; (2) the distribution of teaching effort and student enrollments among science and mathematics courses; and (3) subject matter coverage as reflected by textbook use. Some discrepancies were found between data from a special survey and the CBEDS, but these were not of sufficient magnitude to justify the costs of collecting new data. Therefore, CBEDS data for 1982 were used to analyze enrollments and levels of teaching effort for mathematics and science courses in grades 9-12. Mathematics accounted for 12.6% of the enrollments and 13.3% of the effort, while the data for science were 6.4% and 6.5%, respectively. Course content was examined, using beginning algebra for the textbook analysis. On the average, about two-thirds of the lessons in the four textbooks were devoted to topics in the state competencies statement. While the structure and content were similar, differences in textbooks were also noted. A comparison with SAT content indicated some disparities with the competencies statement. Tables present the data and other information. (MNS)

MATHEMATICS AND SCIENCE INSTRUCTION IN SOUTHERN CALIFORNIA Edwin C. Myers and R. James Mineo

ABSTRACT

To provide information to support school district consideration of changes in mathematics and science instruction, this paper considers three issues: (1) the adequacy of the California Basic Education Data System for supporting an analysis of subject matter instruction; (2) the distribution of teaching effort and student enrollments among science and mathematics courses; and (3) subject matter coverage as reflected by textbook use.

MATHEMATICS AND SCIENCE INSTRUCTION IN SOUTHERN CALIFORNIA Edwin C. Myers and R. James Mineo

Recent public and professional concern for preserving U.S. leadership in mathematics and science has raised new questions about the extent and quality of secondary school instruction in these subjects.

ironically, both the expressions of concern and the edicts for change have relied on "seat of the pants" information rather than on information reflecting any sensitivity to mathematical and scientific orientations. It is possible but not prudent to critique and change characteristics of mathematics and science instruction while ignorant regarding such matters as the set of courses involved, course enrollments, instructional texts, and achievement tests.

To generate information that can provide an adequate management foundation for considering and/or effecting changes in mathematics and science instruction is beyond the capability of a single investigator or institution. For this reason, the Southern California School Districts Superintendents' Research Council, a consortium of 20 districts, and SWRL, the regional educational laboratory for Arizona, Nevada, and Southern California are conducting a multiorganizational inquiry for that purpose. The results of the inquiry are being reported as analyses are completed. The present paper considers three issues that have been illuminated by the analysis to date: (1) the adequacy of the California Basic Education Data System for supporting an analysis of subject matter instruction; (2) the distribution of teaching effort and student enrollments among science and mathematics courses; and (3) subject matter coverage as reflected by textbook use.

Data Sase Adequacy

It is always possible to conduct a new survey to collect education data, and it has been the tradition to do so each time new information is sought. However, considerable savings in terms of both time and money will be realized if the information can be retrieved from an existing data base. Information on staff effort and enrollment is collected each October for the California Basic Education Data Systems (CBEDS). While these data were not collected for the particular purpose of this investigation, an analysis was conducted to determine if the CBEDS data would be adequate for this purpose. Since questions previously had been raised by the Council and others regarding the reliability and usefulness of CBEDS data, this preliminary investigation seemed appropriate.

To answer questions about the usefulness of the CBEDS data, a comparison was made between information provided by a small independent survey of a number of Southern California school districts and the corresponding data contained in CBEDS. Comparisons (165) were made between course codes assigned by teachers for CBEDS and codes assigned by district administrators in response to the survey. Errors were considered to be present whenever CBEDS recorded a code that was not present in the district survey or the district survey recorded a code not in CBEDS. Of the 28 such errors, nine were found to be in the categories of conservation, earth sciences, environment, and oceanography, which are subjects related to each other. Five of the errors were found to be in the classification of trigonometry either by itself or with intermediate algebra. And three of the errors were found in the classification of

gifted and talented programs where the course might be titled either by its content or by the gifted and talented classification. This left only 11 possible discrepancies unaccounted for. In general, the analysis indicated that while there were some discrepancies between the special survey data and the CBEDS data, these discrepancies were not highly consequential, and were certainly not of sufficient magnitude to justify the costs of a new data collection effort.

Teaching Effort and Enrollment in Secondary Science and Mathematics Courses

Using the CBEDS data for 1982, an analysis of the enrollment and level of teaching effort for secondary mathematics and science courses in grades 9-12 was performed. For mathematics, Table 1 presents the number of teaching assignments (ordinarily classes), full-time equivalent (FTE) teaching staff, and enrollments aggregated for the Council districts. Table 2 presents the same information for science courses.

Mathematics accounted for 12.6% of the course enrollments and 13.3% of the teaching staff effort for grades 9-12 in the Council Districts. In science these percentages were 6.4 and 6.5 respectively.

An inspection of Tables 1 and 2 shows that both in mathematics and science, two or three courses accounted for more than half of the student enrollments with six courses accounting for approximately 80%. Only about 10% of the enrollments in either science or mathematics could be

¹ Data were not available for one of the twenty districts.

considered advanced courses. In addition, within mathematics, more than 10% of the instruction was allocated to courses classified as remedial.

Recommendations for increasing the amount of science and mathematics instruction in the high schools has raised the question of where these additional teachers might be found. One possible source was explored. People who teach mathematics and science have other assignments as well. Presumably people who already teach some mathematics or science would be candidates for teaching additional courses, if they could be relieved of their other assignments. Table 3 presents the allocation of effort for all people who teach at least one mathematics course. Table 4 presents the same information for people who teach at least one science course. People who teach at least one mathematics or science course have approximately 1/3 of their time assigned to other activities.

During the past several years, there has been an increasing interest in various types of computer education. With the collection of the 1982 CBEDS data, eight new assignment categories were added for computer education (2450 to 2459). In the previous years, only one assignment category (2412) was included. In 1981, the 2,164 enrollments in computer programming/science comprised 0.9% of the enrollments in mathematics. In 1982, the combination of all computer education enrollments had increased by 0.6% to a total of 1.5% of the mathematics enrollments. Although there is still only limited teaching effort and enrollment in computer education courses, it is likely that other courses have some computer-related instruction.

Course Content

in addition to examining the distribution of enrollments and effort allocated to the categories of courses identified by the CBEDS codes, analyses were conducted to provide some information about the content of these categories. A survey of the Council districts requested information regarding the textbooks used in the courses offered by the districts.

Course titles. Since a number of courses could be classified within the same CBEDS category, an examination of the course titles was made. Table 5 presents for each CBEDS mathematics category the course titles identified by district staff. Table 6 presents the same information for science courses. An examination of these tables shows that while there are a fairly large number of individual course titles, with few exceptions the course titles within each CBEDS code are quite similar.

Course textbook. Another indicator of the content of the CBEDS course categories is the textbook being used. Table 7 presents the textbooks used in the various courses within each CBEDS code for mathematics. Table 8 presents the same information for science courses. The number of different textbooks is particularly evident in those categories for which enrollments are highest.

Textbook content. In view of the number of textbooks identified with categories of courses an additional analysis was performed in order to explore possible variations in content among texts within a particular classification. The course selected for this analysis was beginning algebra. Beginning algebra or algebra I is typically required for

It is the most frequently taken mathematics course and accounts for more than 20% of the total mathematics course enrollments. The academic senates of the California Community Colleges, the California State University, and the University of California have published a statement of the competencies expected of entering freshmen as a result of a beginning algebra course in high school.

Four texthooks widely used in Southern California were selected for this analysis. In addition, three of these texts were examined hased on the minimum average and maximum course sequences as defined by the teacher's edition. In all, ten courses of study were examined.

The topics identified in the academic senates' competencies statement were used to compare the content coverage of the textbooks. Each textbook was examined page by page and the number of lessons allocated to each topic in the competencies statement was recorded. When textbooks addressed topics not included in the competencies statement, these topics were also noted. In addition, a record was made of the sequence in which topics were introduced by recording the lesson number in which a topic first appeared. The texts examined made provision for either 160 or 170 lessons during the year. Table 9 presents the lesson number in which a topic was first introduced, and Table 10 presents the percentage of lessons for each topic.

In these tables, the first 12 topics corresponds to those in the Academic Senates' competencies statement. Sample problems for these topics can be found in Table 11. Topics 13 through 23 are topics not included in the competencies statement.

in general, the courses tended to be similar in their sequencing of topics. That is, topics appearing early in one course were most often found at the beginning of other courses. In addition, the topics included in the competencies statement tended to be covered earlier than topics not included in the statement. The textbooks had similar structures.

On the average, about 2/3 of the lessons were devoted to the topics in the competencies statement with the remaining third divided between additional topics and review and testing. Topics heavily emphasized by one text also tended to be emphasized by the others.

While the structure and content of the courses were in general similar, there were also differences among textbooks and among courses within a textbook. For example, the Houghton Mifflin text provides only about 1/3 of the amount of instruction on linear equations and their graphs as the other texts do, and within the Harcourt Brace Jovanovich text, the minimum course omits instruction in quadratic equations while the average and maximum courses provide approximately four days of instruction.

SAT Content. In addition to comparing the topics and examples contained in the competencies statement with four textbook samples, the analysis also included a comparison of the statement with sample SAT exams. Baron's "How to Prepare for the Scholastic Aptitude Test" (Eleventh Edition) was used to sample the algebra items that typically appear on the mathematics sections of the SAT. The intent of this comparison was to identify similarities and/or differences among the expected competencies of entering college freshmen, the textbook

coverage, and the specific skills and test items that are used to assess the requisites for college entrance.

The sample SATs include a very high percentage of application problems, as compared with the corresponding amount of practice in all four textbooks reviewed. This means that students will encounter items that test certain competencies, but in an application format. For example, simple linear equations in textbooks typically take the form $x = 2(\frac{1}{2})(2\frac{1}{2}) + 2\frac{1}{2}$, whereas the corresponding SAT example is: "If two halves of $2\frac{1}{2}$ are added to $2\frac{1}{2}$, the result is ___." The former is a straightforward operation using literal symbols, while the latter requires translating the words into symbols first.

Among the Algebra I competencies identified by the Academic Senates, the sample SATs examined include items that bear only indirect resemblance to either the corresponding instruction in the textbooks reviewed, or to the sample items provided in the the Senates' statement. Table 12 contrasts corresponding sample items from among the competencies statement, the textbooks reviewed, and the SAT.

Since both the competencies statement and the SAT are intended to represent standards for college admission, discrepancies between them could have important implications for high school instruction. Additional analysis will be required to determine the relationships among the college entrance standards, the most widely used entrance examinations and the content of the popular high school textbooks. If high schools are to have confidence that their instructional programs are providing adequate preparation for college work, the requirements of both the college faculty and the entrance examinations must be inderstood.

. Math Texts by CBEDS

1402 - Mathematics/Pre-Algebra (gr 7-8)

Bramson. Algebra: An Introductory Course. Amsco, 1978.

Denholm, et al. Elementary Algebra, Part 1. Houghton Mifflin, 1970.

Jacobs. Introductory Algebra. Harcourt, Brace, Jovanovich, 1976.

Nichols, et al. Holt Pre-Algebra. Holt, Rinehart, Winston, several editions.

Shulte, Peterson. Preparing to Use Algebra. Laidlaw, several editions.

Stein. Fundamentals of Mathematics. Allyn and Bacon, 1968.

1403 - Beginning Algebra (gr 7-8)

Jacobs. Introductory Algebra II. Harcourt, Brace, Jovanovich, 1976.

Nichols, et al. Holt Algebra 1. Holt, Rinehart, Winston, 1974.

2400 - General Mathematics/Basic Mathematics (gr 9-10)

Betz, et al. Everyday General Mathematics. Ginn, 1972.

Bolster, Woodburn. Mathematics in Life. Scott Foresman, several editions.

Bolster, Woodburn, Gipson. Consumer and Career Mathematics. Scott Foresman, 1983.

Boyce, et al. Mathematics for Technical and Vocational Schools. Wiley, 1975.

Bragg, Couzins, Gilbert, McKillip. General Mathematics Skills and Applications. Silver Burdett, 1979.

France, Clark. Spectrum Mathematics. Laidlaw, 1973.

Gerardi. General Mathematics: Skills, Problem Solving, Application. Harcourt, Brace, Jovanovich, 1982.

Jacobs. Mathematics, A Human Endeavor. Freeman, 1970.

Keedy, Bittinger, Smith, Anderson. General Mathematics. Addison Wesley, 1980.

Lyng. Career Mathematics: Industry and the Trades. Houghton Mifflin, 1976. 27

Miller. Understanding the Metric System. Allyn and Bacon, 1965.

Price, Brown, Charles, Clifford. Mathematics for Everyday Life. Merrill, 1978.

Price, Brown, Charles, Clifford. Mathematics for the Real World. Merrill, 1978.

Price, Brown, Charles, Clifford. Mathematics for Today's Consumer. Merrill, 1979.

Shaw, Wheatley, Kane, Schaefer. General Math I. Houghton Mifflin, 1980.

Stein. Fundamentals of Mathematics. Allyn and Bacon, 1968.

Stein. Practical Application in Mathematics. Allyn and Bacon, 1972.

Stein. Refresher Mathematics. Allyn and Bacon, 1980.

Tobin. Mathematics for Today. Oxford Book Co., Inc., 1976.

Wells, Schulte, Choate. Mathematics for Daily Use. Laidlaw, 1977.

Wiebe. Foundations of Mathematics. Harcourt, Brace, Jovanovich, 1962.

2401 - Consumer Mathematics/Senior Mathematics (gr 11-12)

Bolster, Woodburn, Gipson. Consumer and Career Mathematics. Scott Foresman, 1983.

Lange, Mason, Rousos. Business Mathematics. Houghton Mifflin, 1981.

Lyng. Career Mathematics: Industry and the Trades. Houghton Mifflin, 1977.

Olson. Business and Consumer Arithmetic. Prentice, 1969.

Price, Brown, Charles, Clifford. Mathematics for Everyday Life. Merrill, 1978.

Stein. Refresher Mathematics. Allyn and Bacon, 1980.

Thompson. Consumer Mathematics. Glencoe, 1978.

2402 - Remedial Mathematics/Math Labs (any of gr 7-12)

Practical Mathematics. 1971.

Bernstein, Wells. Troubleshooting Mathematics Skills, Basic Competency Edition. Holt, Rinehart, Winston, 1979.

Bolster, et al. Mathematics Around Us. Scott Foresman, 1975.

Burrill. PRAISE. Scott Foresman, 1975. $2\hat{z}$

- Johnson. Purchasing, Banking, Credit, Home Mgt., Taxes, Transportation. Hacienda La Puente USD, 1980.
- Jones. Learning to Compute. Harcourt, Brace, Jovanovich, 1973.
- Price, Brown, Charles, Clifford. Mathematics for Everyday Life. Merrill, 1978.
- Shaw, Wheatley, Kane, Shaefer. General Math I. Houghton Mifflin, 1980.
- Staff. Real Life Math Skills. Scholastics, 1978.
- Stein. Fundamentals of Mathematics. Allyn and Bacon, 1968.
- Stein. Refresher Mathematics. Allyn and Bacon, 1980.
- Stein. Repaso Matematico (Refresher Mathematics). Allyn and Bacon, 1980.
- Williams, et al. Computational Arithmetic. Star Publishing Company, 1979.

2403 - Beginning Algebra (any of grade 9-12)

- Brown, Smith, Dolciani. Basic Algebra. Houghton Mifflin, several editions.
- Corcoran, et al. Algebra One. Scott Foresman, several editions.
- Dolciani. Modern School Mathematics: Algebra I, Book I. Houghton Mifflin, 1967.
- Dolciani, et al. Algebra I. Houghton Mifflin, 1980.
- Dolciani, et al. Algebra: Structure and Method, Book 1. Houghton Mifflin, several editions.
- Foster. Algebra One. Merrill, 1983.
- Jacobs. Introductory Algebra. Harcourt, Prace, Jovanovich, 1976.
- Jacobs. Introductory Algebra 2. Harcourt, Brace, Jovanovich, 1976.
- Moser, Becker, Phillips, Starr, Howden. Algebra One. Random House, 1973.
- Nichols, et al. Holt Algebra 1. Holt, Rinehart, Winston, 1974.
- Payne, et al. Algebra One. Harcourt, Brace, Jovanovich, several editions.
- Peters, Schaaf. Fundamentals of Algebra. American Book Company, 1970.

Saxon. Algebra I, An Incremental Development. Grassdale Publishers, Inc., 1981.

Shulte, Peterson. Preparing to Use Algebra. Laidlaw, several editions.

Stein. Algebra in Easy Steps. American Book Company, 1975.

Stein. Elementary Algebra: A Guided Inquiry. Houghton Mifflin, 1972.

Stein. Modern Algebra Step by Step, 2nd Book. American Book Company, several editions.

Travers, et al. Using Algebra. Laidlaw, several editions.

Wetchons, et al. Algebra, Book 1. Ginn, 1970.

2404 - intermediate Algebra

Allendoerfer. Principals of Mathematics. McGraw Hill, 1969.

Dolciani, et al. Algebra 2 and Trigonometry 2. Houghton Mifflin, 1980.

Dolciani, et al. Algebra and Trignometry: Structure and Method, Book 2. Houghton Mifflin, several editions.

Dolciani, et al. Modern Algebra: Structure and Method, Book 1. Houghton Mifflin, 1973.

Gaughan, et al. Algebra, Second Course. Scott Foresman, 1982.

Hart. Algebra, Elementary Functions, and Probability. D. C. Heath, 1965.

Keedy, et al. Algebra Two. Addison Wesley, 1978.

Keedy, et al. Algebra Two and Trigonometry. Addison Wesley, 1978.

Keedy, et al. Algebra and Trigonometry. Holt, Rinehart, Winston, 1967.

Payne. Algebra II/Trigonometry. Harcourt, Brace, Jovanovich, 1972.

Pearson. Trigonometry and Related Topics. Ginn, 1974.

Travers, et al. Using Advanced Algebra. Laidlaw, 1981.

Vanatta, et al. Algebra Two: A Modern Course. Merrill, 1966.

Vogeli, Moredock. Algebra Two and Trigonometry. Silver Burdett, 1972.

2405 - Plane Geometry

Banks. Geometry. Webster-McGraw, 1972.

30

Bolster, et al. Mathematics Around Us. Scott Foresman, 1975.

Coxford, Usiskin. Geometry: A Transformation Approach. Laidlaw, 1975.

Hirsch. Geometry. Scott Foresman, 1979.

Jacobs. Geometry. Freeman, 1974.

Jurgensen, et al. Modern School Mathematics: Geometry. Houghton Mifflin, several editions.

Jurgensen, et al. Geometry. Houghton Mifflin, several editions.

Jurgensen, et al. Modern Basic Geometry. Houghton Mifflin, 1973.

Jurgensen, et al. Modern Geometry: Structure and Method. Houghton Mifflin, several editions.

Moise, Downs. Geometry. Addison Wesley, several editions.

Nichols, et al. Holt Geometry. Holt, Rinehart, Winston, 1974.

Peters, Schaaf. Fundamentals of Geometry. American Book Company, 1972.

Ulrigh, Czarnec, Guilbault. Geometry. Harcourt, Brace, Jovanovich, 1978.

Wetchons. New Plane Geometry. Ginn, 1958.

Wetchons. Trigonometry with Tables. Ginn, 1957.

Wilcox. Geometry, A Modern Approach. Addison Wesley, 1974.

2406 - Solid Geometry

Jurgensen, et al. Geometry. Houghton Mifflin, 1980.

Jurgensen, et al. Modern Basic Geometry. Houghton Mifflin, 1975.

2407 - Trigonometry

Coxford. Trigonometry. Harcourt, Brace, Jovanovich, 1982.

Dressler, Rich. Trigonometry. Amsco, 1975.

Nichols. Modern Trigonometry. Holt, Rinehart, Winston, 1968.

Wooton, et al. Modern Trigonometry. Houghton Mifflin, 1973.

2408 - Intermediate Algebra/Trigonometry

Dolciani. Modern School Mathematics: Algebra 2 and Trigonometry, Book 2. Houghton Mifflin, several editions.

Foster, Rath, Winters. Algebra II with Trigonometry. Merrill, 1979.

Nichols, et al. Holt Algebra 2, with Trigonometry. Holt, Rinehart, Winston, 1978.

2409 - Solid Geometry/Trigonometry

Payne. Trigonometry and Circular Functions. Harcourt, Brace, Jovanovich, 1972.

Wooton, et al. Modern Trigonometry. Houghton Mifflin, 1973.

2410 - Probability/Statistics

Willoughby. Probability and Statistics. Silver Burdett, 1968.

2411 - Modern Algebra

Dolciani, et al. Algebra: Structure and Method, Book I. Houghton Mifflin, 1981.

2412 - Computer Programming/Science

Albrecht, et al. Basic for Home Computer. Wiley, 1978.

Dwyer, Critchfield. Basic and the Personal Computer. Addison Wesley, 1978.

Golden. Computer Programming in the Basic Language. Harcourt, Brace, Jovanovich, 1975.

2413 - Advanced Placement Mathematics (gr 11-12)

Brown. Advanced Mathematics: An Introductory Course. Houghton Mifflin, 1978.

Coxford, Payne. Advanced Mathematics: A Preparation for Calculus. Harcourt, Brace, Jovanovich, 1978.

Leithold. The Calculus with Analytic Geometry, Part 1. Harper and Row, 1976.

Riddle. Calculus and Analytic Geometry. Wadsworth, 1974.

Shanks, Gambili. Calculus, Analytic Geometry/Elementary Functions. Holt, Rinehart, Winston, 1973.

Thomas. Elements of Calculus and Analytic Geometry. Addison Wesley, 1976.

2414 - Analytic Geometry/Pre-calculus

Buchanan. Limits. Houghton Mifflin, 1970.

Coxford, Payne. Advanced Mathematics: A Preparation for Calculus. Harcourt, Brace, Jovanovich, 1972.

Crosswhite, Hawkinson, Sach. Pre-Calculus Mathematics. Merrill, 1976.

Dolciani. Modern Intro Analysis. Houghton Mifflin, 1970.

Ellis. Statistical Inference. Prentice Hall, 1975.

Fuller. Analytical Geometry. Addison Wesley, 1979.

Gold, Carlbert. Modern Applied Mathematics. Houghton Mifflin, 1971.

Gordon, Fuller. Plane Trigonometry with Tables. McGraw Hill, 1978.

Protter, Morrey. Analytic Geometry. Addison Wesley, 1966.

Shanks, Brumfield, Fleenor, Eicholz. Pre-Calculus Mathematics. Addison Wesley, several editions.

Smith. Precalculus Mathematics. Wadsworth, 1979.

Sorgenfrey, Beckenbach. Analysis of Elementary Functions. Houghton Mifflin, 1980.

Wetchons, et al. Modern Trigonometry. Ginn, 1962.

Wooten, et al. Modern Analytic Geometry. Houghton Mifflin, 1981.

Wooton, et al. Modern Trigonometry. Houghton Mifflin, 1973.

2415 - Calculus

Coxford, Payne. Advanced Mathematics: A Preparation for Calculus. Harcourt, Brace, Jovanovich, 1972.

Crowell. Calculus with Analytic Geometry. Norton, 1968.

Leithold. Calculus with Analytic Geometry. Harper and Row, 1976.

Protter, Morrey. Calculus with Analytic Geometry. Addison Wesley, 1963.

Swokowski. Calculus with Analytical Geometry. Prindle, 1979.

Thomas, Finney. Elements of Calculus and Analytic Geometry. Addison Wesley, 1981.

2416 - Mathematics, gifted talented

Brown, Smith, Dolciani. Basic Algebra. Houghton Mifflin, 1980.

Corcoran, et al. Algebra One. Scott Foresman, 1977.

Dolciani, et al. Algebra I. Houghton Mifflin, 1980.

Table 7 (continued)

Dolciani, et al. Modern Algebra: Structure and Method, Book 1. Houghton Mifflin, several editions.

Jacobs. Introductory Algebra. Harcourt, Brace, Jovanovich, 1976.

Jacobs. Introductory Algebra 2. Harcourt, Brace, Jovanovich, 1976.

Jurgensen, Brown, King. Geometry. Houghton Mifflin, 1980.

Moser, Becker, Phillips, Starr, Howden. Algebra One. Random House, 1973.

Payne, Coxford, Lankford, Zamboni. Algebra One. Harcourt, Brace, Jovanovich, 1977.

Shulte, Peterson. Preparing to Use Algebra. Laidlaw, 1981.

Travers, et al. Using Algebra. Laidlaw, 1974.

ong the stable of the second

Ulrigh, Czarnec, Guilbault. Geometry. Harcourt, Brace, Jovanovich, 1978.

Wilcox. Geometry, A Modern Approach. Addison Wesley, 1974.

2498 - Other

Boyce, et al. Mathematics for Technical and Vocational Schools. Wiley, 1982.

Coxford, Payne. Advanced Mathematics: A Preparation for Calculus. Harcourt, Brace, Jovanovich, 1982.

Ewen. Mathematics for Career Education. Merrill, 1972.

Table 11

Sample Problems for Algebra I Topics in the Academic Senate Compenticies Statement

1. Arithmetic operations with positive and negative rational numbers.

* (b) Find
$$1\frac{9}{10} - 7\frac{1}{2}$$

(c) Find
$$(-\frac{2}{3})(-\frac{6}{11})$$

2. Arithmetic operations with literal symbols.

* (b) Simplify:
$$\frac{2}{a} + \frac{3}{b} - \frac{5}{a}$$

(c) Evaluate
$$\frac{xy-y}{2x-y}$$
 if $x=2$, $y=3$, $y=4$, $z=5$

3. Linear equations and their graphs.

(a) Solve:
$$4(3t + 2) - 5t = -4$$

(b) Solve:
$$\frac{3x}{4} + \frac{2x}{4} + \frac{9}{8} = 0$$

* (c) Solve:
$$\frac{2}{3x+1}+2=\frac{2}{3}$$

(d) Solve:
$$\frac{5}{2x-3} - \frac{8}{3-2x} = 1$$

(e) Graph
$$y = 2x + 1$$

(f) Solve
$$|2x - 1| = 3$$

4. Inequalities.

(a) Solve
$$3x - 1.4 < 2.2$$

* (b) Solve
$$4x - 1\frac{1}{2} \ge 2\frac{3}{4} + x$$

(c) Solve
$$-2x > 6$$

- 5. Ratio, proportion, and variation.
 - (a) If V waries inversely as the square of S and V = 512 when S = 30, find V when S = 40.
 - *(b) If y varies directly as x and y is 36 when x is 4, find y when x is 6.
- 6. Operations with integer exponents.
 - (a) Simplify $\frac{(5ab^2)(2a^3b)^2}{a^3b^2}$
 - *(b) Express $(x^{1/2}y^{-3})(x^{-7}y^{2})^{-1}$ without parentheses or negative exponents.
 - (c) Express $\frac{x^2y^3z}{x^{-1}y^{-2}z}$ without negative exponents and simplify.
- 7. Operations with polynomials and rational expressions.
 - (a) Expand $(2x+3)^2$
 - * (b) Expand $(x^2 3x + 5)(2x 1)$
 - (c) Simplify: $\frac{18x^2y^3 12x^4y + 15x^3y^2}{3xy}$
 - (d) Simplify: $\frac{x^2 + 2x + 1}{5x 5} \cdot \frac{15}{x + 1}$
 - * (e) Simplify: $\frac{2}{x^2-9} + \frac{1}{x+3} \frac{3}{x-3}$
 - (f) Simplify: $\frac{x^2 + 6x + 9}{x^2 + 3}$
 - (g) Simplify: $\frac{\frac{2}{a} + \frac{1}{4a}}{a + \frac{a}{11}}$

- 8. Systems of linear equations and their solutions.
 - *(a) Graph 2x + 3y = 6 and x y = 3 and find their point of intersection.

(b) Find x and y:
$$\begin{cases} 3x + y = 4 \\ 2x - 3y = 10 \end{cases}$$

- 9. Special products and factoring.
 - (a) Factor completely: $27x^3 3x$
 - *(b) Factor completely: $3x^2 + 20x + 12$
- 10. Solution of quadratic equations.
 - (a) Solve: $49x^2 25 = 0$
 - *(b) Solve: $x^2 + 3x 2 = 0$
- 11. Use of formulas.
 - (a) Find an expression for the area of a triangle whose base measures 6x and height measures 8y.
 - * (b) If the diameter of a circle is a and its circumference is 20 cm., find the circumference of a circle whose diameter is $\frac{3}{2}$ a.
 - (c) If the volume of a cube is 27 cm³, find the length of one side.
- 12. Elementary word problems.
 - (a) The base of a rectangle is twice the height. If the area is $95z^2$, find the dimensions.
 - (b) Veronica leaves home walking at 3 miles per hour. One half hour later, her mother goes after her walking at 4 miles per hour. Find how long it will take her mother to catch up with her.
 - * (c) A company currently owns a copy machine that takes 5 hours to print 5,000 copies of a newsletter. If the company buys a second copier that prints 1,500 copies per hour and uses both machines, how long will it take to print these newsletters?

Table 12

Item Comparisons Among the Competencies Statement, Textbooks and Sample SAT Problems

Competencies	Statement	Textbook Instruction	Sample SAT Problems
	Arithm	etic Operations with Litera	1 Symbols
ivaluate (y - w ex - y if x=2, y =3,	w=4, 2=5	Evaluate $x^2 - 2xy + y^2$ if $x=4$ and $y=-3$	ab - 2cd = p ab - 2cd = q 6cd - 3ab = r P = ?
	Arithmetic	Operations with + and - Ra	tional Numbers
Find - 4.7 +	5.3	x = 1.6 - 6.8 + 8.4	Mr. A owes Mr. B \$70 and Mr. B owes Mr. A \$60. I Mr. A gives Mr. B a \$50 bill, how many dollars i change should Mr. B give Mr. A?
